Table 1.

Global Prevalence of Chronic HBV Infection, by Country

Prevalence Category Country

High Angola, Benin, Burkina (≥8%) Faso, Burundi, Cameroon,

Central African Republic,

Congo, Côte d'Ivoire,

Djibouti, Equatorial Guinea, Gabon, Gambia, Ghana, Guinea, Haiti, Kiribati, Kyrgyzstan, Laos, Liberia, Malawi, Mali, Mauritania, Mongolia, Mozambique, Namibia, Nauru, Niger, Nigeria, Niue, Papua New Guinea, Senegal, Sierra Leone, Solomon Islands, Somalia. South Sudan.

Sudan, Swaziland, Togo, Tonga, Uganda, Vanuatu,

Vietnam, Yemen, and

Zimbabwe. **Intermediate**

Albania, Bhutan, Cape Verde, China, Democratic (5.0-7.9%)

Republic of the Congo, Ethiopia, Kazakhstan, Kenya, Marshall Islands, Moldova, Oman, Romania, Rwanda, Samoa, South Africa, Tajikistan, Tanzania, Thailand, Tunisia, Tuvalu,

Uzbekistan, and Zambia.

Low Intermediate

Algeria, Azerbaijan, (2.0-4.9%)Bangladesh, Belarus,

Belize, Brunei Darussalam,

Bulgaria, Cambodia, Colombia, Cyprus, Dominican Republic,

Ecuador, Eritrea, Federated States of Micronesia, Fiji, Georgia, Italy, Jamaica,

Kosovo, Libya,

Madagascar, Myanmar, New Zealand, Pakistan, Palau, Philippines, Peru, Russia, Saudi Arabia,

Singapore, South Korea, Sri Lanka, Suriname, Syria,

Tahiti, and Turkey.

Afghanistan, Argentina, Low $(\leq 1.9\%)$ Australia, Austria, Bahrain,

Barbados, Belgium, Bolivia,

Prevalence Category Country

Bosnia and Herzegovina, Brazil, Canada, Chile, Costa Rica, Croatia, Cuba, Czech Republic, Denmark, Egypt, France, Germany, Greece, Guatemala, Hungary, Iceland, India, Indonesia, Iran, Iraq, Ireland, Israel, Japan, Jordan, Kuwait, Lebanon, Lithuania, Malaysia, Mexico, Morocco, Nepal, Netherlands, Nicaragua, Norway, Palestine, Panama, Poland, Portugal, Qatar, Serbia, Seychelles, Slovakia, Slovenia, Spain, Sweden, Switzerland, Ukraine, United Kingdom, United Arab Emirates, United States of America, and Venezuela.

No data

Andorra, Antiqua and Barbuda, Armenia, The Bahamas, Botswana, Chad, Comoros, Cook Islands, Dominica, El Salvador, Finland, Grenada, Guinea-Bissau, Guyana, Honduras, Latvia, Lesotho, Lithuania, Luxembourg, Macedonia, Maldives, Malta, Mauritius, Monaco, Montenegro, North Korea, Paraguay, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, San Marino, Sao Tome and Principe, Timor-Leste, Trinidad and Tobago, Turkmenistan, and Uruguay.

NOTE: This table is based on data from the Travelers' Health Branch of the Centers for Disease Control and Prevention (CDC) Division of Global Migration and Quarantine.the Centers for Disease Control and Prevention (CDC)

Table 2.

Baseline HBV Serologic Results

HBsAg	anti-HBs	anti-HBc		Interpretation		Recommended Action			
(+)		(-)		(+)		Chronic HBV infection		Link to care for HBV treatment	
(+)		(-)		IgM (+)		Acute HBV infection		Link to care for management and follow-up	
(-)		(+)		(+)		Resolved HBV infection		Reassurance	
(-)		(+)		(-)		Immune to HBV		Reassurance	
(-)		(-)		(-)		Susceptible to HBV (non immune)		cinate	
(-)		(+)				"Isolated anti-HBc" may represent (1) prior HBV infection, (2) a false-positive test, (3) occult HBV infection, or (4) window phase of acute HBV infection		Expert consultation advised to determing optional further evaluation and management.	

Abbreviations: HBV= hepatitis B Virus; HbsAg = hepatitis B surface antigen; anti-HBs = hepatitis B surface antibody; anti-HBc = hepatitis B core antibody

Table 3.

Indications for Hepatitis B Vaccination

Groups with Indication for Hepatitis B Vaccination

All infants

Unvaccinated Children Younger than 19 Years of Age

Persons at Risk for HBV Infection by Sexual Exposure

- Sex partners of HBsAg-positive persons
- Sexually active persons who are not in a long-term, mutually monogamous relationship (e.g. persons with more than one sex partner during the previous 6 months)
- Persons seeking evaluation or treatment for a sexually transmitted infection
- Men who have sex with men

Persons at Risk for Infection by Percutaneous Exposure

- Persons who currently or recently injected drugs
- Household contacts of HBsAg-positive persons
- Residents and staff of facilities for developmentally disabled persons
- Health care and public safety personnel with reasonably anticipated risk for exposure to blood or blood-contaminated body fluids
- Hemodialysis, predialysis, peritoneal dialysis, and home dialysis patients
- Persons with diabetes aged 19-59 years of age
- Persons with diabetes 60 years of age and older at the discretion of the treating clinician

Others at Increased Risk of Acquiring HBV Infection

- International travelers to countries with high or intermediate levels of endemic HBV infection (HBsAg prevalence of 2% or greater)
- Persons with hepatitis C virus infection
- Persons with chronic liver disease (including, but not limited to, persons with cirrhosis, fatty liver disease, alcoholic liver disease, autoimmune hepatitis, and an ALT or AST level greater than twice the upper limit of normal)
- · Persons with HIV infection
- Incarcerated persons

Persons Desiring Protection Against HBV

Abbreviations: ACIP = Advisory Committee on Immunization Practices; HBsAg: hepatitis B surface antigen; HBV = hepatitis B virus; ALT = alanine aminotransferase; AST = aspartate aminotransferase

Table 4.

Interpretation of Test Results for Hepatitis B Virus Infection

HBsAg	Total anti-HBc	lgM anti-HBc	Anti-HBs	HBV DNA	Interpretation
-	-	-	-	-	Never infected; susceptible
+	•	-	-	+ or -	Early acute infection, <i>or</i> Transient (up to 18 days) after vaccir
+	+	+	-	+	Acute infection
-	+	+	+ or -	+ or -	Acute resolving infection
-	+	-	+	-	Recovered from past infection and in
+	+	-	-	+	Chronic infection
-	+	-	-	+ or -	Isolated core antibody
					False-positive (susceptible), or Past infection (resolved), or "low-level" chronic infection (unlikely Passive transfer of anti-HBc to infant
-	-	-	+	-	Immune if anti-HBs concentration is 3 completing vaccine series, <i>or</i> Passive transfer after hepatitis B imm 3 to 6 months)

Abbreviations: anti-HBc = antibody to hepatitis B core antigen; anti-HBs = antibody to hepatitis B surface antigen antigen; HBV DNA = hepatitis B virus deoxyribonucleic acid; IgM = immunoglobulin class M.

Source:

Table 5.

Interpretation of Test Results for Hepatitis B Virus Infection

HBsAg	Anti-HBc	Anti-HBs	Interpretation	
Negative	Negative	Negative	Never infected; susceptible	
Positive	Negative	Negative	Early acute infection, <i>or</i> Transient (up to 18 days) after vaccination	
Negative	Positive	Positive	Recovered from past infection and immune	
Positive	Positive	Negative	Chronic infection	
Negative	Positive	Negative	 Past infection (resolved), or False-positive (susceptible), or "Low-level" chronic infection (unlikely to be infectious), or Passive transfer of anti-HBc to infant born to HBsAg-positive mother 	
Negative	Negative	Positive	Immune if anti-HBs concentration is 10 mIU/mL or greater after completing the vaccine series, <i>or</i> Passive transfer after hepatitis B immune globulin administration (for 3 to 6 months)	

Abbreviations: anti-HBc = antibody to hepatitis B core antigen; anti-HBs = antibody to hepatitis B surface antigen; HBsAg = hepatitis B surface antigen.

Table 6.

Postexposure Management of Health Care Personnel after Occupational Exposure to HBV

	Postexpo	sure Testing	Postexpos		
HCP Status	Source Patient (HBsAg)	HCP testing (anti-HBs)	HBIG	Vaccinati	
Documented responder after completing series (≥3 doses)					
Documented nonresponder after two complete series	Positive/unknown	Not indicated	HBIG x 2 separated by 1 month	_	
	Negative	No action needed			
Response unknown after	Positive/unknown	<10 mIU/mL	HBIG x 1	Initiate revac	
complete series	Negative	<10 mIU/mL	None	Initiate revac	
	Any result	≥10 mIU/mL	No action needed		
Unvaccinated/incompletely	Positive/unknown	Not indicated	HBIG x 1	Complete vac	
vaccinated or persons who refuse HBV vaccine	Negative	Not indicated	None	Complete vac	
Abbreviations: HCP = health ca hepatitis B immune globulin; N		hepatitis B surface antige	n; anti-HBs = antiboo	ly to hepatitis
